

SUBJECT INDEX

- Acrydium*, see grouse locusts
adaptation
and ecotypes 146
and isolation 43, 279
and Mendelism 26
and theories of evolution 251
adaptive surface 45, 201, 280
altruism and selection 11, 25, 33, 104, 231
ancestral heredity 3, 13, 64, 141
ancestry, community of 225
aphids, parthenogenesis and evolution 191
Apoteitix, see grouse locusts
artificial insemination donor 265
atomic weapons 217
average effect 227, 231
- Biston betularia* 9
blood groups
in chickens 134, 267
sex difference 134, 212, 270
in Man 37, 129
dominance 37, 209
mutation and selection 183, 206
Rhesus complex 194
breeding systems in plants 189, 237
- canalization 238
chance and choice 160, 163, 262, 265
correlation 115
between relatives 5, 56, 64, 116, 205, 218, 256
cousin marriage 186
crocodiles 105
cuckoos 82
- Darwin, C.
attitude to Paley 178
and his autobiography 179
controversy with Butler 292
essays of 1842 and 1844 7, 23-4, 194
experiments on cross- and self-fertilization 200
influence of Erasmus Darwin 158, 179, 292
and Malthus 101
and his predecessors 295
role of environmental influences in evolution 158
useless structures 85
views on heredity 90, 121, 138-45, 153
Darwinian evolution, see natural selection
diallel crosses 231, 256
- diffusion equation 274
dominance evolution 27, 86, 193, 208, 211, 232, 238, 242, 252, 272
Muller's and Plunkett's views 193
and outbreeding 225
polymorphic species 128
selection of modifiers 41, 205, 217
and separation of sexes 225, 232
Drosophila 101, 144, 159, 210, 239, 254, 268, 288
- ecotypes 146
eugenics 33, 51, 60, 80, 136-7, 167, 170, 185
and attitude of biologists 170
and differences in fertility 132, 272
and individualism 137
and sterilization 79
see also family allowances
Eugenics Society 6, 8, 11, 15-17, 37, 68, 70, 79, 128-31, 141, 168, 171, 205-6
evolution theory, worked by mutation 5, 51, 149, 159, 236, 240, 251
- family allowances 34, 107, 126, 132-3, 142, 169, 185, 223-4, 234
- family size
and birth control 192, 233, 240
and intelligence 188-9
and sex ratio 260
variability 185
fertility in Man and selection 225-6, 240-1
free will 60, 100-1, 159-65
- Gallus* 84, 89, 191, 269
Galton Laboratory 12, 16, 37, 96, 117, 153, 166, 214
gene-complex 11, 196, 282
gene frequency distribution and diffusion equation 274
genetic similarity of groups and common ancestry 225
Genetical theory of natural selection
reviews
by Haldane 35, 213
by Punnett 35, 131
by Wright 36, 199, 278
second edition 202
grouse locusts 30, 128, 227, 241-51, 278
- heredity
blending theory and C. Darwin 153, 155, 157, 253
- particulate theory and Galton 152, 156
heritability 116
hermaphroditism 237
heterosis 231
heterostyly and sheltering of deleterious genes 235
homostyly in *Primula* 189
human population levels and economic factors 108, 192
- inbreeding 200, 230, 232, 237-8, 280
and dominance 252
in Man
cousin marriage 55, 186
defective children 6, 54, 239
in mice 264
and quantitative traits 251
role in evolution 43-4, 46
short-term selective advantage 189
incest 239, 265
indeterminism 102, 162, 261-2
and evolution 264
individuality and social co-operation 219-20
industrial melanism 9
infanticide
in Man 59, 71
in rodents 163
intelligence and family size 188-9
isonymy 186
- kin selection 104, 231
- Lamarckism 22, 27, 100, 122, 144, 147, 158, 232, 236, 271, 289, 296
Lebistes 128, 208, 227
Limentis 39, 186, 203
Lysenkoism 233
Lythrum 174
- Malthusian parameter 25, 229
marsupials 191
Melitaea, 197-9, 202
Mendel's work
and natural selection 3, 95, 195, 252-5
over-accuracy of data 57, 199-200
mental defectives, children of 171
mice
infanticide 162
segregating inbred lines 264
mimicry
evolution of 8-9, 28, 32, 187, 238
and variability 165
mutation and evolution 4-5, 11, 24, 26, 155, 159, 239-40
mutation rates and selection 88, 95, 101, 252
- natural populations and latent variability 205
- natural selection
and altruism 33, 104-5, 231
and death rates 123
fundamental theorem 25-6, 39, 46
individual vs. group advantage 231-2, 237
intensity of 187-8, 246
and longevity 104, 166
in Man 192
and differential reproduction 226
and Marxist views 183, 215
and nauseous insects 81
and parasites 58, 83
and social insects 60, 84
theory of
centenary of 294
criticisms 38, 72, 81, 139-40, 224
and Mendel's work 1-4, 95, 139
why neglected 251
see also dominance; evolution; mimicry; selection
- paleontology 150
pangensis 2-3, 143-5, 152, 155, 157
parasitism 58, 82-3
Paratettix, see grouse locusts
parthenogenesis and evolution 191
polygenic inheritance 236
and meristic traits 256
see also quantitative traits
polymorphism
balanced 9, 30, 243, 290
and close linkage 227, 248-9, 278
with large selective differences 188
transient 9
population size 273
and effect of selection 41, 287
and rare mutants 255, 288
population subdivision 95, 98, 274
and adaptation 43, 184, 199, 204, 288
and intergroup selection 189
Primula 189, 194
- quantitative traits 227
and genetic interactions 231, 251
and inbreeding 252
and selection 148
- random genetic drift
and evolution 46, 178, 199, 278
and population size 41-6, 95, 98, 273
and selection 41, 274
and variable selection 272
Wright's views 184, 278
religion and science 182
reproductive value 25, 123, 266
and parental care 104
and selection 123
research and its moral attraction 130

- science
 - and religion 182, 262
 - and specialized journals 190
- selection
 - between groups 46, 189
 - efficacy of small consistent component 27, 41, 44, 188, 273
 - efficacy of small mortality rate 212
 - and environment 260, 272
 - fluctuating 149
 - in fluctuating environment 272
 - and fluctuations in population size 178, 196
 - and human blood groups 183, 206
 - and linkage values 28, 209-10, 227, 248, 252, 278
 - and locality 246
 - of modifiers, *see* dominance evolution; mimicry
 - and mutation rate 95, 252
 - and population size 188
 - and rate of gene substitution 188
 - and reproduction in Man 226
 - seasonal fluctuations 28, 249
 - short-term advantage of self-fertilization 189
 - see also* natural selection
- sex difference and serological test 134
- sex ratio
 - and natural selection 32, 232, 237
 - and sex control in humans 260
- sexual preference 31, 64, 259, 261
- sexual reproduction and evolutionary advantages 31, 225, 264
- sexual selection in birds 222, 261
 - non-genetic early nesting theory 39, 123-8
- social insects 60, 83, 122, 226
- social services and protectionism 142
- speciation 31, 274
- Zoarcis* 256
