Professor R. A. Fisher,  
Galton Laboratory,  
University College,  
Gower Street,  
London, W.C.1.

Dear Fisher,

I enclose the first part of the technical communication for the Soil Bureau, that I mentioned to you. Jacks intends to ask your opinion on ~~it~~ whether it is suitable. You might like to try it on some of your students.

The present batch deals with designs involving factors at two levels only. An introductory section is still to be written. There will follow sections on factors at three levels, then  $3 \times 2 \times 2$  etc. I hope to include a brief account of pseudo-factorial designs if space permits.

Yours sincerely,
