Professor R.A. Fisher,  
Galton Laboratory,  
University College,  
London,  
W.C.1.

18th October, 1934.

Dear Fisher,

I enclose an account of the results of the examination for biases in sampling which I told you about. The height measurements are particularly pretty, especially as the observer had here no inducement to take a biased sample, and presumably thought he was really improving his observations by taking the extra measurements.

Where would you suggest submitting it for publication? I feel it has a certain interest outside agriculture. The Supplement to the Journal of the R.S.S. suggests itself, but I have just had a paper in that and if they ask me to give a paper on confounding that will make a second. Is it suitable for the Annals of Eugenics ?

Yours sincerely,
