

27 April 1934.

Dear Yates,

Thanks for your paper on four-fold tables. I think it is extremely good, but would suggest that it would stand ~~amplification~~ on the representation of the three-fold field of possible tables and in expanded descriptive matter in connection with the charts.

Where are you thinking of publishing? The subject is not inappropriate to the Cambridge Philosophical Society, though it is perhaps a little long for this - or would you like to put it in the Annals of Eugenics, which is at present not very well known for statistical work, but may, perhaps, become so.

I am returning your paper, herewith.

Yours sincerely,
