HERTS

1st November, 1933.

Dear Fisher,

Many thanks for your letter and for getting the proposal form filled up. I had a feeling that Sir John might be drawing on his imagination.

I have had a further letter this morning from Mainland of Dalhousie University on substitutes for  $\chi^2$  tests when the numbers in the various classes are small; I shall probably want to ask you some questions on this, but I will wait till I have tackled the points raised myself.

The first two blocks of the pig feeding experiment are now completed. The results appear quite good - an S.D. per pig of 7% of the total increase in live weight.

Yours sincerely,

*F. Yates*
