

1. Jan. 52.

My dear Frank,

This is to catch you on your return and to convey a suggestion started by Hopkins in Canada and in which I find myself in agreement, it is that the title of our tables puts them outside the reading and abstraction of physicist's chemical engineers etc. You might like to consider how it would be to call the next edition "Statistical Tables For Research" with, in smaller letters, the words "Agriculture, Biological, Chemical, Medical" arranged in some sort of a pattern\_-like in an American Drug Store.

Yours sincerely
