

25th. March 1947.

Dear Yates,

You may recall an old paper of mine giving a list of the significance of the leading harmonic component of a series of values such as annual values in Meteorology. I have now prepared a fuller table and send you a copy, with a view to fitting it into Statistical Tables at some time or other. A possible heading is

typed at the foot of your copy, and I hope some time to work an  
example, <sup>the explanation of</sup> which need not be at all lengthy, for the introduction.

Yours sincerely,
