

February 20, 1939

Dear Yates,

I am returning herewith your paper on Unequal variances, and I have let Jeffrey^s know of its existence on the chance that the Society are willing to go so far towards admitting a mistake.

I am not clear whether the word "fiducial" (fourth line page 10) really means a priori. On the next page, reading carelessly, I thought "the change of sign" referred to θ , where, of course, it does make a difference if n_1 is not equal to n_2 .

I have received the enclosed Mathematical Tables from Grant, of Oliver & Boyd. You might return the letter and the tables after you have got any ideas which seem profitable for our miscellaneous pages.

Can you give Oliver & Boyd the present address of Roger O. Johnson - see attached letter?

Yours sincerely,
