November 22, 1939

Dear Dr Gray,

Many thanks for your letter on the high proportion of B in your Glasgow material. In view of your explanation I will see that it is not published as a random Glasgow series.

I hope, however, that, if the collection of donors from the general public is continued in Glasgow, as at other centres, we may be able to collect the results, as they will be representative of an important part of the population of Western Scotland, for which it is most desirable to obtain accurate figures. The 1500 odd cases which Mr Scott sent me represent, I suppose, the earlier results of the transfusion service programme in Glasgow, and perhaps already there may be further accretions. Should I look to you for these for the future?

Yours sincerely,
