

March 5. 32

CRIPPS'S CORNER,
FOREST ROW,
SUSSEX.

Dear Fisher.

I see in today's Nature a review of Huxley by Haldane. It reminds me that I have not yet read that book. I have rather definitely avoided doing so, because I hear that he attacks me unfairly. I don't want to be tempted into controversy with, you know, I hold generally does more harm than ^{any} good. But I think I must read it soon. At the end of the review in Nature Haldane speaks of the "unfortunate breach between genetic research and Eugenic propaganda". To what does he allude? Pearson? Is not his, what? Haldane has, I think, misrepresented my views, and he

may have a down on the Dean
and me. But I can't see how
we are opposed to the exclusion
of genetic research. I see
that Holdam is publishing a
book on "The Causes of Evolution"
which ought to be interesting. He
is, I am glad, generally civil to
you -

Do not answer this unless
the spirit moves you. I am
an idle man now. But I
may bore you with another
letter on evolution some day

Yours sincerely
L. Darwin
