

Oct. 16-30

CRIPPS'S CORNER,

FOREST ROW,

SUSSEX.

Dear Fisher.

Thanks for yours. You can judge much better than I can about genetic qualifications; but I incline to agree with you. I advised my niece to study correlation first and causation afterwards; and this advice, I think, fits in with your views.

I intended to champion propaganda as against research for our Society only. See Extract from my Galton Swan song herewith - to be destroyed. I may at times have been irritated by the thought - that £20,000 (??) has been expended

at the Galtin Lab. in the last 10
years, with what result? My
brother & Mrs. Puissant started a
research scholarship at Cambridge;
but I cannot find that anything has
come of it. But these facts ought not
to influence me. It is because we are
the only propaganda ~~force~~^{body}, and
because I know that that was what
Twitden wanted, that I am inclined
to press this view ^{rather} ~~heavily~~. Anyhow
the Twitden money is coming in badly,
& for 2 years we shall have little
to spare. Your proposed survey seems
to me very interesting and valuable,
and if money intended for such
work was available, I should most
certainly like to see the line you
suggest pursued.

Yours hastily

L-D
