CRIPPS'S CORNER,

FOREST ROW,

SUSSEX.

My dear Fisher,

I sent you a brief letter
last night with the review,
which is I understand in our
Review. I originally suggested
that my nephew Charles Darwin
should be approached on this
matter and this review will
I suppose in consequence of it.
I hope there has been no
muddle about it all. My

nephew Charles was just a pro-
fessor at Manchester University
and now is a professor at Edin-
burgh University. He was early
made an F.R.S. with regard
to his work in connection
with the quantum theory I believe,
and is well known in that
region of thought. His second
name is Garton being called
after F. G. with whom his father
was a great friend. I am anxious
that he should begin writing on
ingenious subjects. I like him
very much but he is not a very
easy person to move. I would
send in your letter to him if you like.
I however return it now because I
cannot take the two last lines anyhow and

CRIPPS'S CORNER,

SUSSEX.

better come out. People

always think they are better
known than they are. He
told me he had scribbled
over all your book with his
Comments mathematical
& otherwise, many of which
he says no doubt are
erroneous. I wonder whether
you by any chance would
care to see that copy. It
possibly might give you
some hints. I will send on
the green pamphlet to him

but will await a reply from
you before so doing.

Yours sincerely
L. Darwin
