

[July 1930?]  
J.R.B.

Dear Fisher, here with Charles's review

CRIPPS'S CORNER,  
FOREST ROW,  
SUSSEX.

I suppose I must look on it as confidential  
and so I think must you until the review  
comes out. I shall want it back if I am to write  
to America about it. This is written in great haste  
in a note en leaf way home.

yours sincerely  
L. Darwin  
J.R.B.

The heterozygosity of the alleles will determine  
the stability of the gene pool and therefore the  
one or other homozygote replaces the other. This  
is quite distinct from the fact that when the gene pool  
(hardy weinberg) is in equilibrium is by  
difference and not by a change about the stability  
or instability of the alleles. The question is whether the  
one or the other difference is given by the difference.
