[October 1925?]

J.H.B.

Dear Fisher.

I have instructed the
Enclosed, though not in love with
it, and rather hope you will
do so also, as we seem hard
up for material for October.

After my doubts as to Malinowski
and your not initially it,
Mr H. very rightly sent it back
to him saying we could not
take it. Burton has some
useful material, I think.
I note that the birth rate
lags behind death rate,
and this indicates a correction

between the two. I can easily
understand short period
oscillations in death rate;
as the result of disease.

Temporary immunity and other
causes might do it. I take
it to be vital an article
means no more than in the
present state of articles
offered it is best to take
it

Yours

d. Darwin
