

From MAJOR L. DARWIN, Cripps's Corner, Forest Row, Sussex.

Nature. July 1-33 p 37 - "...the larger bird...  
lay fewer eggs ... the larger chick requires more  
parental attention .... The limiting factor does not  
lie in the capacity of the bird to 'lay eggs' - for  
reasons given. This fits in with my pellet  
theory. No answer.

L.D.
