

Overleigh House,
STREET,
Somerset.

Tel: STREET 33

August - 1st 1947.

My dear Ron,

Here are the completed
dominula results. The last-
day we did it together was
Thursday 24th. I think you
have a full note of the data
for that day, but I repeat
them, to be on the safe side.

Sheppard collected
up to and including the 27th
and I enclose his letter, from
which you will see he says that-

"It was getting increasingly difficult to find the insects for the last three days!"

I got an assistant from the Hope Department to collect on Tuesday 29th. He knows the forms well and, being the last day, he had no marking to do. He is an accurate and careful worker and experienced entomologist. He says that the insects here not very

common, and were rather
warm and old for the most-
part-. Also that the weather
was excellent. Yet-, though he
collected for 3 hours, he
only caught- 31.

Sheppard remarks that-
there seems clearly a drop in
numbers at- the end this year.
This seems clear, and we really
do seem to have got-
evidence on it-.

Sheppard's expenses here

paid by our Oxford funds,
and he is very grateful for the
experience. I hope you will
find these data clear as set-
out on 5 sheets herewith.

Yours truly,
Henry
