

20 June 1945

My dear Henry,

Thanks for your letter. Yes, of course, either before or after the 17th would suit me, but I am not sure that it will suit dominula. However, you might keep an eye on this and let me know, if necessary at short notice, how they are doing. I do not know whether observations on the larvae give any useful forecast of date of emergence, but many things have been shifted quite three weeks this year.

Yours sincerely,
