

November 3, 1942

My dear Henry,

Just a line to go with enclosed offprint from "Nature", which I think you may be glad to have as a memorandum pending something fuller which I must write as soon as possible. I have quite an open mind as to the anomalous plant. We should grow about 1000 daughters from it next year, and have progenies from eight of this years daughters growing next year, so I do not think that particular mystery will long elude us.

Yours sincerely,

Offprint: Polyploid inheritance in Lythrum salicaria
