

26th. September, 1942.

Dear Henry,

I expect you are already in touch with Taylor as to starting the work at the Radcliffe Infirmary. I shall be settling the October meetings very soon now. There is nothing special about them, but I should like to know when you will be giving us another visit. What do you think of Saturday 3rd?

I am not sure that I get your meaning about the non-secretors. Rice thought that he had shown that if the first page of his records were omitted, as he thinks they should be, on account of inexperience with Anti-O, that the proportion of secretors of Os, As, Hsp^d B₂ comes to be equal at about 75%. The page I sent was, however, rather complicated.

Yours sincerely,
