

October 31st: 1934.

My dear Fisher.

I am very grateful to you for giving me the opportunity of reading your wonderful paper. I really do feel it a contribution of the greatest significance. As you know I have always been impressed with the importance of dominance theory, and it is a triumph to get this construction. I hope it will be out in time for me to refer to in my text-book of Genetics. Naturally I look forward immensely to the final results, which I see you hope for in two years time. Of course the information on linkage, the nature of cerebral lesions (r. good?) etc, which you have picked up is most valuable.

In regard to Gammarus. I think we may say that 17 separate genes have been looked at. This however includes a gene for red
