

16 MUSEUM ROAD,
OXFORD.

6th March 1930

Thursday.

Dear Fisher,

Thank you for your kind letter. I look forward to the time when you do write on polymorphism; don't put it off too long! In the meanwhile I am very glad you approve of what I have written. I was sorry to bother you again, but I was anxious to know if you thought I had studied the matter fairly. Also if it was correctly brought out in the summary; that is

so important I feel - and not too
easy to do!

I hope we can meet
soon. I have some information on
periodic fluctuations in numbers, of its
influence on variation, in a wild
population which I really believe
would make a most exciting statistical
study. But it will be necessary
to get some people to do the collecting.
However I personally think it rather
exciting, & would like to talk it over with
you some time.

Again with many thanks,

Yours sincerely,
E. B. Ford

P.S.

I am sending the paper on *Somivance*
in to the American Naturalist.
