

3 July 1930.

Prof. R.C. Punnett, F.R.S.,
Whittinghame Lodge,
CAMBRIDGE.

Dear Professor Punnett,

I should like to come to the Poultry Congress meeting, though of course it is too early from my poultry experiment to have any results. I could report the segregation in a backcross of about 120, making a contribution of about 10 minutes or 15.

Are you doing anything about that note on a tricolour mouse, or are you waiting for me to do something. Also will you be making any use of that work I did on your Lathyrus data in the winter?

Yours sincerely,
