

October 28, 1942

Dear Taylor,

Thanks for your letter. I am exceedingly sorry that you do not think you can manage to meet me at the R.S. Dinner. It would have been so nice if you could have come.

I am glad you are continuing to search a further lot of cow serum for good antigenic properties against group O. I suppose Race uses his own blood for absorption.

I had supposed that, dividing the pledgelet into three, you could test its capacity in weakening the three different test fluids. When Race has a good anti-O, I think this might be worth trying. Later I hope there may be no difficulty in obtaining blood samples from the mother also.

Yours sincerely,
