

March 15, 1940

Dear Taylor,

As you suggested, I have written to Stewart, and enclose a copy of my letter. The lot of 537 which you enclose from Swansea is exceedingly puzzling, and is a good example of the value of getting the men and women separated in these returns. I do not ~~xxx~~ know whether you noticed that they give

Women 35% A ⁴⁹~~32~~% O

against Men ~~49~~⁴⁷% A 38.3% O

This is quite strongly discrepant at sight on the numbers tested. Roughly speaking the women are Scots and the men are Swedes. I am recording the data with a query, as I imagine nothing can be done about it.

Yours sincerely,
